The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Bogeso et al, US patent 4,136,193 cited by applicants. It discloses the first step in Ex. 2. The second step which is distillation is disclosed in Ex.3 at col.7, lines 21-25.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bogeso et al, US patent 4,136,193. It discloses the cyanation first step which yields citalopram at col.6, lines 4-8. Although it doesn't distill this citalopram it vacuum distills *citalopram* made by a synthesis where the 5-cyano group is made by the same type of cyanation of the 5-halo precursor which lacks the 1-3 (dimethylamino) propyl group. See Ex. 3 at col.7, lines 1-25.

Thus one of ordinary skill in the art would have been motivated to vacuum distill the citalopram made in Ex. 2 of the reference. Film distillation is a technique known to the ordinary person in the art.
